## I. Introduction

## Introduction

- Specimen: Multi-Layer Ceramic Capacitor (1005, 1608 size)
- Test:
- Strength test
- Bending test with PCB
- Cross-sectional observation
- Test term: 2013. 12. $01^{\text {~ 2104. 2. } 03}$
- Test environment: $(25 \pm 5)^{\circ} \mathrm{C}$, Below $75 \%$ room humidity
- Test apparatuses:
- Precision impedance analyzer (4294A, Agilent, USA)
- Material testing system (MTS858, MTS, USA)
- Scanning electron microscopy (Quanta 3D DualBeam, FEI, Netherland)
- Etc: Blind test
- Contact: Lee, Ju Ho 芭 +82-31-789-7282 / leejuho@keti.re.kr

## Introduction

- Test apparatuses:
- Precision impedance analyzer (4294A, Agilent, USA)

## Introduction

- Test apparatuses:
- Material testing system (MTS858, MTS, USA)

## Introduction

- Test apparatuses:
- Scanning electron microscopy (Quanta 3D DualBeam, FEI, Netherland)

## Strength test method/Regulation

- Test standard: EIAJ ET-7403
- According to "EIAJ ET-7403", the strength test was performed using MTS858 material testing system.

## - Regulation

- 10 N was applied to the sample during 10 second. After testing, capacitance chan ge value should be small(within individual specification ).

(Schematic diagram of strength test)

## Bending test method/Regulation

- Test standard: JEITA ET-7409-104A
- Basically, according to "JEITA ET-7409-104A", the bending test was performed using MTS858 material testing system.
- Etc:
- Due to the limitation of apparatus, we measured force (kN) to bend the PCB and displacement ( mm ) when capacitance was changed to $\pm 10 \%$.
- Capacitance of some MLCCs were not changed up to $\pm 10 \%$ even the PCB bended up to 20 mm . In this case, we only measured displacement of PCB and capacitance after bending test.
- Moving speed of indenter: $10 \mathrm{~mm} / \mathrm{min}$ (up to 20 mm )

(Schematic diagram of bending test)

Layout of PCB

Company B／C／D strength capability is a little bit low．

## II. Bending test

## Remarks

1. In the case of bending test using PCB, due to limitations of apparatus, we measured force ( kN ) to bend the PCB and displacement ( mm ) when capacitance was changed $\pm 10 \%$.
2. Capacitances of some MLCCs were not changed $\pm 10 \%$ even the PCB bended up to 20 mm . In this case, we only measured displacement of PCB and capacitance after bending test.

## A社 1005

## 〈Test result>

|  | No. 10 | 96.93 | 0.04647 | 3.59 | 98.23 |

- Note: The capacitance value of sample No. 5 is 169.05 mF . It may be that the some inner electrodes were damaged during the bending test. This low capacitance does not mean 'open' or 'short'.
- $\mathrm{C}=\mathrm{Q} / \mathrm{V}=\varepsilon(\mathrm{A} / \mathrm{t})$

Here, $\mathrm{C}, \mathrm{Q}, \mathrm{V}, \varepsilon, \mathrm{A}$, and t are capacitance, electric charge, voltage, dielectric constant, area of electrode, and distance between electrodes, respectively.

## <Judgement>

Total 7items are satisfied with regulation.

## D社 1608-2

## 〈Test result>

| Sample | 1 KHz |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Before (nF) | Force to <br> bending (kN) | Displacement <br> $(\mathrm{mm})$ | Capacitance <br> after bending (nF) |  |
| Company D | No.1 | 90.71 | 0.07413 | 6.47 | 86.70 |
|  | No.2 | 90.18 | 0.07682 | 7.21 | 81.77 |
|  | No.3 | 91.51 | 0.0744 | 6.85 | 70.95 |
|  | No.4 | 88.95 | 0.05113 | 5.24 | 11.08 |
|  | No.5 | 89.16 | 0.05588 | 5.17 | 69.64 |
|  | No.6 | 91.26 | 0.05769 | 5.54 | 420.931 mF |
|  | No.7 | 89.50 | 0.05931 | 5.77 | 7.30 |
|  | No.8 | 90.49 | 0.07755 | 7.43 | 93.18 |
|  | No.9 | 89.71 | 0.04391 | 3.54 | 47.23 |
|  | No.10 | 91.49 | 0.05798 | 5.76 | 188.571 mF |

- Note: The capacitance values of sample No. 6 and No. 10 are 420.931 and 188.571 mF, respectively.

It may be that the some inner electrodes were damaged during the
bending test. This low capacitance does not mean 'open' or 'short'.

- $C=Q / V=\varepsilon(A / t)$

Here, $\mathrm{C}, \mathrm{Q}, \mathrm{V}, \varepsilon, \mathrm{A}$, and t are capacitance, electric charge, voltage, dielectric constant, area of electrode, and distance between electrodes, respectively.

## <Judgement>

All of items are not satisfied with regulation. : NG

Summary

| Sample <br> (1005) | OK <br> (20mm bend) | NG <br> (Over limit) | N/A <br> (Damaged) | No result <br> (Stop test) |
| :---: | :---: | :---: | :---: | :---: |
| A | 2 pcs | $6 p c s$ | $2 p c s$ |  |
| B |  | 5 pcs | 1 pc | $4 p c s$ |
| C | 4 pcs | 2 pcs |  | $4 p c s$ |
| D |  | 7 pcs |  | $3 p c s$ |

| Sample <br> $(1608-1)$ | OK <br> $(20 \mathrm{~mm}$ bend) | NG <br> (Over limit) | N/A <br> (Damaged) | No result <br> (Stop test) |
| :---: | :---: | :---: | :---: | :---: |
| A | 9 pcs |  |  | 1 pc |
| B | 9 pcs |  |  | 1 pc |
| C | $8 p c s$ |  |  | $2 p c s$ |
| D | $9 p o s$ |  | 1 pc |  |

| Sample <br> $(1608-2)$ | OK <br> (20mm bend) | NG <br> (Over limit) | N/A <br> (Damaged) | No result <br> (Stop test) |
| :---: | :---: | :---: | :---: | :---: |
| A | 5 pcs |  |  | 5 pcs |
| B | 3 pcs | 1 pc |  | 6 pcs |
| C | 7 pcs |  |  | 3pcs |
| D |  | I | 3 pcs | 2 pcs |

## <J-chip comment>

Due to all of samples are NG, it is difficult to judge.

All of company items are satisfied with regulation(except a few pcs).

Company D's PCB bending capability level is no good, if compare to another company level.
